

# Termux:Boot

---

From Termux Wiki

Jump to: [navigation](#), [search](#)

This addon will run scripts immediately after device was booted.

## Installation

Download add-on from F-Droid [📄](#)

**Important: Do not mix installations of Termux and Addons between Google Play and F-Droid.** They are presented at these portals for your convenience. There are compatibility issues when mixing installations from these Internet portals. This is because each download website uses a specific key for keysigning Termux and [Addons](#).

## Usage

1. Install the Termux:Boot app.
2. Go to Android settings and turn off battery optimizations for Termux and Termux:Boot applications.
3. Start the Termux:Boot app once by clicking on its launcher icon. This allows the app to be run at boot.
4. Create the `~/.termux/boot/` directory: Put scripts you want to execute inside the `~/.termux/boot/` directory. If there are multiple files, they will be executed in a sorted order. Note that you may want to run `termux-wake-lock` as first thing if you want to ensure that the device is prevented from sleeping.

Example: to start an `sshd` server and prevent the device from sleeping at boot, create the following file at `~/.termux/boot/start-sshd`:

```
#!/data/data/com.termux/files/usr/bin/sh
termux-wake-lock
sshd
```

If you want Termux-services to start services on boot, you can use:

```
#!/data/data/com.termux/files/usr/bin/sh
termux-wake-lock
. $PREFIX/etc/profile
```
