

Dorks Eye

****Dorks Eye Google Hacking Dork Scraping and Searching Script****

Dorks Eye is a script I made in python 3. With this tool, you can easily find Google Dorks. Dork Eye collects potentially vulnerable web pages and applications on the Internet or other awesome info that is picked up by Google's search bots.

Here you can read the article about Dorks Eye:

<https://hackingpassion.com/dorks-eye-google-hacking-dork-scraping-and-searching-script/>

![Screenshot](Img/dork-eye-banner.png)

You can save the output in a file so that you can view it at a later time. You can determine the number of searches yourself. The number of websites to display

You can also use Dorks Eye as a command-line interface (CLI) to quickly search through Google. Dorks Eye shows only the links, without advertising, and is and is also fast.

But be careful not to overdo it, otherwise, you have a chance that If you perform too many requests over a short period, Google will start to throw captchas at you. This is annoying and will limit how much or how fast you do the search.

What data can we find using Google Dorks?

Username and passwords

Admin login pages

Sensitive documents

Govt/military data

Email lists

Bank account details

Vulnerable websites

So much more â€¦

Install Dorks Eye

A prerequisite for a script that I make must be that it is simple and easy to use and understand for everyone.

Dorks Eye has tested it so far on:

- * Kali Linux
- * Parrot Security
- * BlackArch
- * Termux

This list would be expanded

Dork Eye is written for Python 3. Clone the git repository and install the requirements.

Linux

```
sudo git clone https://github.com/BullsEye0/dorks-eye.git
```

```
cd dorks-eye
```

```
pip3 install -r requirements.txt
```

Dorks Eye Usage Linux

```
sudo python3 dorks-eye.py
```

Thatâ€™s all ...!

Have fun ðŸ™‚

Termux

```
git clone https://github.com/BullsEye0/dorks-eye.git
```

```
cd dorks-eye
```

```
pip install -r requirements.txt
```

Usage Termux

python dorks-eye.py
