Termux-share

Share a specified file or text from standard input.

Usage

termux-share [options] [file]

If file to share is not specified, program will read standard input.

Options

```
-a action        which action to performed on the shared content:
                 edit/send/view (default:view)
-c content-type  content-type to use (default: guessed from file extension,
                 text/plain for stdin)
-d               share to the default receiver if one is selected
                 instead of showing a chooser
-t title         title to use for shared content (default: shared file name)
```
