Postgresql

Create skeleton database

```
mkdir -p $PREFIX/var/lib/postgresql
initdb $PREFIX/var/lib/postgresql
```

Starting the database

```
pg_ctl -D $PREFIX/var/lib/postgresql start
```

Similarly stop the database using

```
pg_ctl -D $PREFIX/var/lib/postgresql stop
```

Create User

```
$ createuser --superuser --pwprompt yourUserName
```

Create your database:

```
$ createdb mydb
```

Open your database

```
$ psql mydb
```

You will now see the promt

```
mydb=#
```
